

POCKET SMART AI

SYSTEM ANALYSIS

EXISTING SYSTEM

In a conventional approach, users may need to use different websites or applications for different information needs. This can require additional time and effort.

LIMITATIONS

- Information may be distributed across multiple services.
- Users may need to switch between applications.
- There may be no single interface for the required assistance.

PROPOSED SYSTEM

Pocket Smart AI provides a centralized web interface where users can submit requests and receive assistance. The frontend communicates with the backend, which processes the request and returns a response.

ADVANTAGES

- Simple interaction.
- Centralized assistance.
- Frontend and backend separation.
- Easy to extend.
- Suitable for online deployment.
