

POCKET SMART AI

SYSTEM DESIGN

SYSTEM ARCHITECTURE

User → Frontend Interface → Backend/API → AI/Application Logic → Response → Frontend Display

MODULES

- User Interface Module – accepts user input and displays responses.
- Backend Module – receives requests and manages application logic.
- AI Assistance Module – handles smart-response functionality.
- Emergency Information Module – provides configured emergency information where implemented.
- Deployment Module – makes the application available online.

DATA FLOW

1. User enters a request.
2. Frontend sends the request.
3. Backend receives and processes it.
4. AI/application logic generates the result.
5. Backend returns the response.
6. Frontend displays the response.
