

POCKET SMART AI

TESTING

TESTING OBJECTIVE

Testing verifies that the frontend, backend, and deployed application work as expected.

TEST CASES

1. Application Loading – Open the application. Expected: page loads successfully.
2. Valid Request – Enter a valid request. Expected: a suitable response is displayed.
3. Empty Input – Submit without text. Expected: application handles the input safely.
4. Backend Communication – Send a request while the backend is running. Expected: frontend receives a response.
5. Deployment – Open the deployed URL. Expected: application is accessible.
6. Emergency Information – Enter a configured emergency request. Expected: configured emergency information is displayed.

TESTING METHODS

Functional testing checks individual features. Integration testing checks frontend-backend communication. Usability testing checks ease of use. Deployment testing checks the online application.
